The U.S. lift Truck division stationed in Cleveland has a professional team experienced in Sales, Purchasing, Marketing, Logistical and Technical Support.

In the beginning the domestic forklift market in Korea was an open import enterprise. Korea Machinery Co. Ltd. begun in 1960, to import fully assembled lift trucks as part of a domestic equipment expansion project. Product sales of these products were initially targeted to state-run companies, large scale corporations, and the armed forces. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced trade operations throughout Korea to service and sell this heavy equipment. By 1978, a forklift production plant was successfully completed. Continuous technical instruction became the new focus for enhancing quality and product development.

Home-based lift truck business for Daewoo started in 1967 and grew to an amazing 90% market share in Korea. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a situation of substantial expansion of their forklift business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a cooperative venture project to respond to competitive pressures in the US materials handling market. This plan greatly expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a contemporary plant which helped set up the business for the manufacture of high end added-value products suitable for export. In 1993, the corporation had a global sales network and started exporting versions they had developed through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
